About This Content

The 3rd Senalux Level Pack adds another 72 levels to the game. It also introduces 7 new optical / optoelectrical components:

- the Emitter shines in a set color when it is illuminated in any color

- the two Circulators deflect a beam by 60° and 120° respectively

- the Attenuator reduces the intensity of a beam by 1

- the Amplifier doubles the intensity of a beam

- the Switch only lets light pass through when illuminated from the side

- the Inverting Switch does the opposite

With these new components it becomes possible to construct arbitrary logical circuits.
